DETAILED ACTION

1. Claims 1-23 of this application conflict with claims 2-28 of Application No. 10/790,692. 37 CFR 1.78(b) provides that when two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application. Applicant is required to either cancel the conflicting claims from all but one application or maintain a clear line of demarcation between the applications. See MPEP § 822.

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-23 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 2-28 of copending Application No. 10/790,692. Although the conflicting claims are not identical,

they are not patentably distinct from each other because Claims 1-23 of the present application is generally broader than the claims(2-28) of your copending application(SN# 10/790,692). In other word, the claims 2-28 of the copending application(10/790,692) set forth all the elements recited in the above claims plus some additional elements which are not required by the above claims of the present application. The additional elements are the following:

“a capture start timing setting register”, “a shift start generation” and “a shift clock assignment circuit”. It would have been obvious to one of ordinary skill in the art to eliminate the additional elements recited in claims 2-28 of the copending application(SN# 10/790,692) which are not required by the above mentioned claims of the present invention and consequently leave the rest of the limitations to correspond to, and be patently indistinct from claims 1-23 of the present application.

It is well established in the court of law that broader claims in a later filed application constitute obvious double patenting of narrow claims in an issued patent. See *In re Van Ornum and Stang*, 214 USPQ 761 and 767 (CCPA 1970) (generic application claim specifying “meat” obvious double patenting of patent claim narrowly specifying “pork”).

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Morita, Orisaka et al, Nakamura et al, Kurokawa et al, Ohta et al,

Lee Tjandrasuwita, Tomiyasu, Kurumisawa et al and Matsueda et al are made of record to show various types of display drivers utilizing shift-registers, latches but none of them singly or in combination teach or suggest the claimed inventions in a manner prescribed in the claims.
